

Updated Report Shows at least 4,697 Natural Resources Management jobs in Hawai'i in 2018

In 2012, The University of Hawai'i Economic Research Organization (UHERO), in cooperation with The Nature Conservancy Hawai'i and Hau'oli Mau Loa Foundation, published a report characterizing the natural resources management (NRM) sector in Hawai'i. The analysis looked specifically at jobs, education, salaries, and expenditures and was conducted using survey data collected from organizations identified as being part of the NRM sector.

Since 2012, the survey has been conducted two more times, once in 2014 with results published in a 2015 report, and most recently in 2018.

A systems map brought to life -- 'Āina-Based Education Video

Together with the Consuelo Foundation, Harold K.L. Castle Foundation, Hawai'i Leadership Forum and Kamehameha Schools, we brought together community members and educators from across the state to listen to their experiences with 'āina-based education (ABED). This resulted in the development of an 'Āina-Based Systems Map that documents and explores

how ABED is making a difference today. Recently, a short video detailing some of the stories and highlights behind the map was produced. A special thanks goes out to Monet Sadural for her work on the video.

The Summer Internship Program at Hau'oli Mau Loa Foundation

Since 2011, the summer intern position at Hau'oli Mau Loa Foundation has evolved. Over the course of these summer experiences, we've had the pleasure of working with eight dynamic young leaders and have learned so much from each of them. This summer's intern, Mr. Andrew Menor, was no exception. The Foundation's aim in providing a paid internship opportunity is to assist a young person in developing knowledge, skills and awareness of the nonprofit sector and organized philanthropy in Hawai'i. Andrew was eager to learn about it all and made regular contributions to the foundation and our partners throughout the summer. We've come to learn firsthand that a great deal of preparation, work and feedback goes into creating good internships. These efforts bear fruit at the end of each summer when we learn what the intern has gained from the experience.
